GIT CHEAT SHEET

Git is the free and open source distributed version control system that's responsible for everything Git Hub related that happens locally on your computer. This cheat sheet features the most important and commonly used Git commands for easy reference.

INSTALLATION & GUIS

With platform specific installers for Git, Git Hub also provides the ease of staying up-to-date with the latest releases of the command line tool while providing a graphical user interface for day-to-day interaction, review, and repository synchronization.

SETUP

Configuring user information used across all local repositories

git config --global user.name "[firstname lastname]"
set a name that is identifiable for credit when review version history
git config --global user.email "[valid-email]"
set an email address that will be associated with each history marker
git config --global color.ui auto
set automatic command line coloring for Git for easy reviewing

SETUP & INIT

Configuring user information, initializing and cloning repositories

git init
initialize an existing directory as a Git repository
git clone [url]
retrieve an entire repository from a hosted location via URL

STAGE & SNAPSHOT

Working with snapshots and the Git staging area

show modified files in working directory, staged for your next commit

git add [file]

add a file as it looks now to your next commit (stage)

git reset [file]

unstage a file while retaining the changes in working directory

git diff

diff of what is changed but not staged

git diff --staged

diff of what is staged but not yet commi" ed

git commit -m "[descriptive message]"

commit your staged content as a new commit snapshot

BRANCH & MERGE

Isolating work in branches, changing context, and integrating changes

git branch
list your branches.a*will appear next to the currently active branch
git branch [branch-name]
create a new branch at the current commit
git checkout
switch to another branch and check it out into your working directory
git merge [branch]
merge the specified branch's history into the current one
git log
show all commits in the current branch's history

INSPECT & COMPARE

Examining logs, diffs and object information

| git log |
|--|
| show the commit history for the currently active branch |
| git log branchBbranchA |
| show the commits on branchA that are not on branchB |
| git logfollow [file] |
| show the commits that changed file, even across renames |
| git diff branchBbranchA |
| show the diff of what is in branch A that is not in branch B |
| git show [SHA] |
| show any object in Git in human-readable format |

TRACKING PATH CHANGES

Versioning file removes and path changes

| git rm [file] |
|---|
| delete the file from project and stage the removal for commit |
| git mv [existing-path] [new-path] |
| change an existing file path and stage the move |
| git logstat -M |
| show all commit logs with indication of any paths that moved |

IGNORING PATTERNS

Preventing unintentional staging or commiting of files

logs/
*.notes
pattern*/

Save a file with desired pa" erns as gitignore with either direct string
matches or wildcard globs.

git config --global core.excludesfile [file]
system wide ignore pa" ernfor all local repositories

SHARE & UPDATE

Retrieving updates from another repository and updating local repos

git remote add [alias] [url]
add a git URL as an alias
git fetch [alias]
fetch down all the branches from that Git remote
git merge [alias]/[branch]
merge a remote branch into your current branch to bring it up to date
git push [alias] [branch]
Transmit local branch commits to the remote repository branch
git pull
fetch and merge any commits from the tracking remote branch

REWRITE HISTORY

Rewriting branches, updating commits and clearing history

git rebase [branch]
apply any commits of current branch ahead of specified one
git reset --hard [commit]
clear staging area, rewrite working tree from specified commit

TEMPORARY COMMITS

Temporarily store modified, tracked files in order to change branches

git stash
Save modified and staged changes
git stash list
list stack-order of stashed file changes
git stash pop
write working from top of stash stack
git stash drop
discard the changes from top of stash stack
